ABOUT ME

Systems Engineer and FullStack Developer experienced in scalable solutions. I am currently deepening my expertise in AI and Data Engineering, applying MLOps principles to build and manage end-to-end machine learning pipelines. I hold a C1 level of English and excel in multidisciplinary teams, bringing a product-oriented mindset to software development.

EXPERIENCE

FullStack Developer Intern

Cleatus AI

Remote

2025

- Led a UI/UX overhaul of the GovCon AI conversational assistant, significantly improving usability and modernizing its visual aesthetic.
- Designed and implemented new analytical dashboards to visualize key procurement data and user engagement metrics.
- Executed database schema modifications to support new dashboard functionalities and optimize data retrieval for the frontend.

FullStack Developer

Abaco Informatica

Tandil, Argentina

2024 - present

- Spearheaded the project's migration from Create React App (CRA) to Vite, resolving all dependency conflicts and updating obsolete packages to enhance performance.
- Designed and implemented a database optimization strategy using Materialized Views, which significantly reduced complex query times.
- Replaced legacy DataTables with AG Grid, engineering a client-side parser to auto-generate grids from raw HTML and implementing advanced features (filters, sorting, export suite).
- Architected a custom "DebugView" system, enabling backend log viewing and an integrated SQL console directly from the frontend, removing the need for server access.

PROJECTS

AI Technical Interviewer

Developed an AI-powered technical interview system. The app gathers candidate data and generates dynamic questions by combining database queries with LLM-generated prompts. It accepts text or voice responses and uses an AI model to evaluate answer quality and provide a final analysis.

AI Chatbot with Automated ETL Pipeline (RAG + Data Engineering)

Built an end-to-end "Chat with your CV" RAG chatbot using FastAPI, Google Gemini, and ChromaDB. Architected a robust, automated ETL pipeline with Apache Airflow and Docker that monitors a GitHub repo and auto-updates the vector DB upon detecting changes.

Absenteeism Prediction MLOps Project

Implemented an end-to-end MLOps system to predict workplace absenteeism. It features a decoupled architecture (Next.js, FastAPI, Vercel Postgres) and an automated Airflow retraining pipeline triggered by new data. Includes a Tableau dashboard for data visualization.

EDUCATION

EF SET, Online

C1 - Advanced English Certificate

2024

Universidad Nacional del Centro de la Provincia de Buenos Aires, Tandil, Argentina

2020-2024

Systems Engineering

Cambridge University, United Kingdom

2018

B2 - First Certificate Exam
