Matías Rodríguez Cárdenas

AI Engineer | Full Stack Developer | LLM Agents, RAG, MCP

Buenos Aires, Argentina (Remote) | matiasrodriguezc01@gmail.com | +54 9 2262 35-9716 | linkedin.com/in/matiasrodriguezc | github.com/matiasrodriguezc | matiasrodriguezc.com.ar

PROFESSIONAL SUMMARY

AI Engineer and Full Stack Developer with 5 years of production software experience, building LLM agents, RAG systems and MCP integrations end to end, from Python/FastAPI backends to React/Next.js and TypeScript frontends, plus native iOS (SwiftUI) and Flutter mobile apps on Supabase. Currently AI Solutions Engineer at Northbridge University, where I co-own the Claude Enterprise deployment, build custom MCP servers that connect agents to Microsoft 365, SharePoint and SurveyMonkey, and ship document-automation agents used across 30 campus locations. Hands-on with OpenAI, Anthropic Claude, Google Gemini and Amazon Bedrock, LangChain and LangGraph, vector databases, and the operational side of AI in production: testing and evaluation, access control and change-managed releases. Systems Engineer, Google Professional AI Certificate, C1 English.

SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Swift, Dart

Generative AI: LLM agents, multi-agent systems, RAG, MCP (Model Context Protocol), tool/function calling, prompt engineering, structured outputs, LLM evaluation, human-in-the-loop workflows

LLM Platforms & Frameworks: OpenAI API, Anthropic Claude API, Claude Agent SDK, Claude Enterprise, Google Gemini, Amazon Bedrock, LangChain, LangGraph, Vercel AI SDK, Hugging Face, Microsoft Copilot Studio

Machine Learning: PyTorch, Scikit-learn, NumPy, pandas, SHAP (Explainable AI), Random Forest, K-Means, embeddings, vector search

Frontend: React, Next.js, TypeScript, AG Grid, Zod

Mobile: Swift, SwiftUI, Flutter, Dart, SQLite, offline-first sync

Backend & Data: FastAPI, REST APIs, Server-Sent Events (SSE), PostgreSQL (Row-Level Security, materialized views), Supabase (Auth, RLS, pgvector, Edge Functions), Deno, Cloudflare Workers, Pinecone, ChromaDB, Apache Airflow, n8n

Cloud & DevOps: AWS (Amazon Bedrock, Boto3), Microsoft Azure, Microsoft Entra ID (SSO/SAML), Docker, Git, GitHub Actions (CI), pgTAP, Microsoft Graph API, Power Automate, SharePoint

EXPERIENCE

AI Solutions Engineer — Northbridge University (Eduk Group), IT Innovation Team

Remote | Apr 2026 – Present

- Built custom MCP servers (SharePoint / Microsoft Graph, SurveyMonkey) and an n8n workflow exposed as an MCP connector, giving Claude agents governed access to enterprise data; preparing centralized Azure hosting for organization-wide use.
- Designed and shipped multi-step document-automation agents for MSCHE accreditation: curricular comparison between institutions, coverage gap analysis across 30 campus locations, and generation of Excel and Word deliverables with human approval gates.
- Shipped four production LLM agents with Copilot Studio and Power Automate (Weekly Status Report, Service Desk, Student Grievances, Meeting Minutes) and delivered a productivity-impact analysis to IT leadership; leading the migration to Claude Agent SDK and Microsoft Graph API.
- Co-own the institutional Claude Enterprise organization: led SSO/SAML integration with Microsoft Entra ID, administer connector and tool-permission policies, and onboard departments, including a 14-skill AI roadmap for the Instructional Design team.
- Built reusable Claude Skills distributed as organization-wide plugins: branded DOCX generation, PMO project intake, portfolio-readiness audits and OCR repair for scanned PDFs.
- Own release approval for the Bay6 AI Tutor Chatbot through the Change Advisory Board, with behavioral testing for hallucinations, refusal-to-invent and Socratic pushback before phased waves of up to 18 Canvas courses; run rubric-based evaluations of vendor AI products (Element451, Pathify, Canvas IgniteAI).

Full Stack AI Engineer — Cleatus AI

Remote | 2025

- Built the frontend (React, Next.js, TypeScript) and AI integration of a GovTech SaaS platform that generates automated RFP responses.
- Engineered content-generation pipelines with Vercel AI SDK, OpenAI GPT-4 and Zod for strict structured-output validation.
- Implemented a block-based editor for human-in-the-loop review of AI-generated proposals and real-time dashboards for vector database metrics and AI engagement.

Software Engineer — Abaco Informatica

Tandil, Argentina | 2021 – Present

- Developed the “Oficina Virtual” platform with Next.js and React, implementing secure authentication flows and multi-tenant data structures.
- Implemented client-side parsing algorithms to render large datasets in interactive AG Grid tables, improving data load times by 40%.
- Optimized enterprise PostgreSQL workloads with materialized views, reducing computational load for downstream analytical processes.

PROJECTS

Lumbre — AI creativity app for iOS (Android planned) | github.com/matiasrodriguezc/Lumbre

- Built the Supabase backend: Postgres + pgvector with Row-Level Security, quotas, auth, LLM distillation of saved content into concepts, cross-domain concept pairing, an AI planner, RevenueCat subscriptions, an OpenAPI contract and app attestation.
- Built the native iOS app in SwiftUI with modular Swift packages: daily idea reveal, offline capture queue, Share Extension, on-device OCR, widgets and App Intents.
- Backed the platform with pgTAP (RLS), Deno, end-to-end and 10x load tests, an evaluation set for generated ideas, GitHub Actions CI and a pre-launch security review.

Tech: *Swift, SwiftUI, Claude API, Supabase (Postgres, pgvector, RLS, Edge Functions), Deno, pgTAP, RevenueCat, GitHub Actions*

Zero — Local-first personal finance app (Flutter, iOS and Android)

- Built an on-device, deterministic NLU assistant (entity extraction, intent scoring, stateful dialog) that turns free text into structured transactions with no LLM calls, no per-message cost and no data leaving the phone; developed test-first against an NLP spec suite.
- Designed offline-first multi-device sync: SQLite triggers flag dirty rows and a sync service pushes and pulls incrementally against a single Supabase jsonb table with RLS, using last-write-wins per row, server-clock cursors and soft-delete tombstones, so new client columns sync without backend migrations.
- Shipped multi-currency transactions, separate spaces, recurring events with local notifications, shared expenses with minimal-transfer settlement, budgets, goals, insights and charts, localized in Spanish, English and Portuguese.

Tech: *Flutter, Dart, SQLite (sqflite), Supabase (Postgres, Auth, RLS), Apple and Google sign-in, fl_chart*

Ronda — Neighborhood barter marketplace for iOS

- Built the native SwiftUI app on a modular Swift package (domain, design system, features, Supabase repositories) tested with Swift Testing: listings, nearby swap matching, in-app chat to close trades, requests and saved searches.
- Built the Supabase backend with SQL migrations and pgTAP tests, a notification queue delivered to APNs by a Deno Edge Function, and shareable listing links with WhatsApp previews served by a Cloudflare Worker.

Tech: *Swift, SwiftUI, Supabase (Postgres, pgTAP, Edge Functions), Deno, Cloudflare Workers, APNs*

Fluent AI — Autonomous multi-agent generative BI platform

- Orchestrated a stateful multi-agent system with LangGraph and Gemini 1.5 Pro (tool calling for dynamic SQL and vector search, SSE streaming in FastAPI), with PostgreSQL Row-Level Security so LLM-generated SQL cannot read cross-tenant data.

AutoBid AI — Hybrid predictive + generative B2B SaaS for bid management

- Trained a Random Forest classifier (Scikit-learn) with SHAP explanations to predict bid success, plus a Pinecone RAG pipeline for proposal writing and Airflow-automated retraining.

RAG Virtual Assistant with Automated ETL — Context-aware documentation chatbot

- Built a RAG chatbot with LangChain and ChromaDB, with an event-driven Apache Airflow pipeline that re-indexes embeddings on every GitHub commit.

EDUCATION

Systems Engineering — Universidad Nacional del Centro de la Provincia de Buenos Aires (UNICEN), Tandil, Argentina | 2020 – 2024

CERTIFICATIONS & TRAINING

- Google Professional AI Certificate — Google (2025)
- EF SET English Certificate, C1 Advanced — EF Standard English Test (2024)
- First Certificate in English (FCE) — Cambridge Assessment English (2018)
- Claude Platform 101, Claude Code 101, Claude Code in Action — Anthropic Academy (2026)
- Generative AI for SDLC (Agents, MCP, Copilot, Cursor) — Developer Boost Seminar, Tandil Tech Cluster (2025)

LANGUAGES

Spanish (Native), English (C1 Advanced, EF SET)
